Natural Vitamin E is a fat soluble Vitamin which exists in 8 different forms. It is a powerful biological antioxidant, which reacts primarily with reactive oxygen species and plays an important role in photo protection, reducing UV-induced free radical damage to skin. It also protects cells against the effect of free radicals which are formed as by-products of the body's metabolic process.

Are you using the correct form of Vitamin E ?

Most skin products contain dl-alpha-tocopheryl acetate, whose antioxidant property is blocked by attached acetic acid. It is sparingly absorbed by the epidermal and dermal layer of human skin, therefore rendering it incapable to fight harmful oxidants. Therefore, free form of Vitamin E like mixed tocopherol or d-alpha tocopherol is perfect for topical applications.

Ecocert Cosmos approved

COSMOS stands for "COSMetic Organic and Natural Standard", which sets certification requirements for organic and natural cosmetics products, recognized globally by the cosmetic industry. We have gained approval for our complete range of Natural Vitamin E and cosmetic blend from Ecocert which can be used in Natural Cosmetics and Organic Cosmetics.

Naturall-SQ PhytoSqualene / PhytoSqualane

Squalene and Squalene are natural organic compounds originally obtained for commercial purposes primarily from shark liver oil. It is a natural component of the sebum & has natural affinity for the skin. It acts as non-comedogenic emollient & skin soothing agent.

In cosmetics and personal care products, Squalane and Squalene are used in the formulation of a wide variety of products including bath oils, hair products, eye makeup, makeup foundations, lipstick, suntan & sunscreen products, body powders, nail products and in cleansing, moisturizing, and skin care products.

Emollient

matwax Sunflower Wax

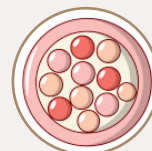

Sunflower Wax is a hard, crystalline, high melting point vegetable wax obtained from winterization of sunflower oil and is Ecocert Certified. It helps to thicken the formulation by providing a rigid structural network of wax crystals, improving oil binding, emolliency, film formation and lubricity.

Sunflower wax can be a useful replacement for beeswax, carnauba, candelilla or mineral waxes.

Formulators use it applications for lipsticks, mascaras, decorative cosmetics, lip balms, emulsions and candles.

PhytoLite Natural Plant Sterols

Phytosterol Esters are one of the bioactive compounds in cosmetics and skin care produced extracted from plants used for skin protection (sunburn) and rejuvenation as well to control skin diseases like scabies, chronic skin disorders, skin psoriasis, eruption and eczema.

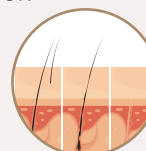

When plant sterols are applied to the skin, they promote cell renewal and maintain cell membranes. This preserves the firmness and elasticity of the skin. They also maintain skin hydration and reduce inflammation which causes blotchy complexions and acne.
